

1. "...navigate autonomously to a sequence of waypoints within a given space..." (p. 3)

Error Code: WRI – Redundant/wordy phrasing. "Autonomously navigate between waypoints" is clearer.

2. "...use the robots from the prior project." (p. 3)

Error Code: CTX – Reader lacks context on "prior project"; briefly summarize its scope.

3. "...2 gorilla-arm mechanisms to drag itself forward." (p. 3)

Error Code: NSFW – Informal diction ("drag itself"); use "propel itself forward."

4. "...as a hinge joint in both legs caused the legs to bend or become too short for locomotion." (p. 3)

Error Code: FF – Vague; quantify or clarify what "too short for locomotion" means mechanically.

5. "Minimal hardware changes were necessary to complete the laid out task..." (p. 3)

Error Code: FF – "Minimal" is qualitative; specify the number or type of modifications.

6. "Each was defined in its own function." (p. 4)

Error Code: SPM – Slight singular-plural mismatch; "Each function was defined separately" improves clarity.

7. "Filtering this noise proved difficult." (p. 5)

Error Code: FF – Qualitative statement; replace with quantitative (e.g., "~20% of data excluded as noise").

8. "...we could not go off of angle between the different time steps alone." (p. 5)

Error Code: SNG – Ungrammatical idiom; use "could not rely solely on the angle between time steps."

9. "Although the script was not completely accurate..." (p. 5)

Error Code: FF – "Not completely accurate" is vague; include an error margin or precision.

10. “It was necessary to compute these motion metrics...” (p. 5)

Error Code: HMRD – Lacks explicit hypothesis → method → result linkage; clarify purpose of computations.

11. “The idea was the phone could be attached to the robot...” (p. 6)

Error Code: SNG – Missing conjunction; should be “The idea was that the phone could be attached to the robot.”

12. “...the target direction and relative direction of the robot could be calculated.” (p. 6)

Error Code: FF – Vague; specify how (e.g., via accelerometer data integration).

13. “Throughout all three trials, the Green Team’s robot showed steady progress...” (p. 7)

Error Code: FF – “Steady progress” = qualitative; provide numeric metric (e.g., completion time change).

14. “...the robot miscalculated its position relative to the next waypoint...” (p. 7)

Error Code: MAC – Assumes cause (‘miscalculated’) without evidence; identify source (sensor vs code).

15. “...lost track of the waypoint...” (p. 7)

Error Code: FF – Non-technical phrasing; specify loss mode (e.g., lost AprilTag lock or position estimate).

16. “The Blue Team’s robot completed the first trials autonomously...” (p. 7)

Error Code: TYP – Typographical error; should read “autonomously.”

17. “...almost being disqualified for exceeding the time limit...” (p. 8)

Error Code: SNG – Dangling participle; use “was almost disqualified for exceeding the time limit.”

18. “...the robot was forced to make large strides in the arena...” (p. 8)

Error Code: FF – Colloquial imagery; use “execute long step lengths” or quantify stride.

19. “...there appeared to be a slight drift in the robot’s trajectory...” (p. 8)

Error Code: FF – “Appeared to be” = subjective; state measured drift angle if available.

20. “...the robot struggled to achieve the correct heading needed to follow the desired path...” (p. 9)

Error Code: WRI – Verbose; simplify to “the robot struggled to maintain the correct heading to follow the path.”
